

ATELIER

VISUAL IDENTITY / BRAND BIBLE

A system for distinct parts coming together.

2026 / CONCEPT V1.2

Pieces in place.

The identity is an act of assembly, not a picture of a tool.

Atelier makes complex asset work legible. Texture, mesh and material are separate things; their relationship becomes visible when they approach, align and click into place.

01 **Three parts, one intention.**
Each piece keeps its own silhouette. They meet; they never merge.

02 **Colour means asset type, until there’s a verdict.**
Blue, teal and copper name things. Only an outcome recolours the pieces, and only in the status glyph.

03 **Motion reports the truth.**
The pieces form the A only when a real event confirms success, never at the end of a timer.

ASSEMBLY FIRST. LETTER SECOND.

The three-piece mark

Each shape has one job, one colour and its own unbroken silhouette.

01 Texture

Rounded tile with a vertical back and a leaning face. Carries the weight.

Holds still on the final approach.

02 Mesh

Rounded parallelogram leaning towards the tile. Gives direction.

Approaches from the right.

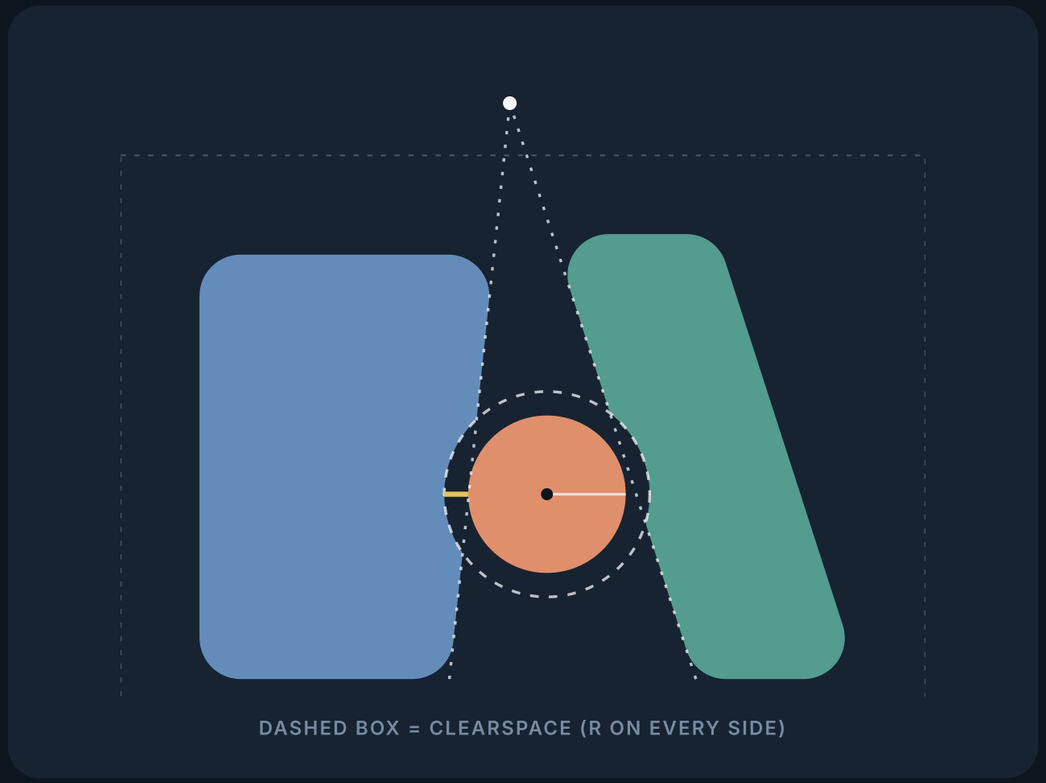

03 Material

A perfect circle seated in both bites. Touches nothing.

Arrives last and completes the set.

An A you discover

The A lives in the leaning edges and the gap at the top, never in an outline or a crossbar.

DASHED BOX = CLEARSPACE (R ON EVERY SIDE)

Construction

HEIGHT	H = 260u	Master grid. Everything below is in these units.
DISC	r = 46u	The unit of clearspace.
GAP	g = 14u	Same around the whole disc.
BITES	R = r + g = 60u	Both concentric with the disc.
CORNERS	k = 24u	Outer corners on both blocks.
FILLETS	f = 6u	Where a bite meets a straight edge.
TEXTURE LEAN	6.0°	Right edge only; back stays vertical.
MESH LEAN	17.9°	Both long edges.

Extended, the two leaning edges meet above the mark: that apex is the implied A. If a bite isn't concentric with the disc, or the gap varies, the mark is wrong. Don't adjust it by eye.

Rich, softened colour

Not pastel. Not neon. Flat opaque fills on a dark neutral canvas.

TEXTURE / BLUE

#6C98CA

Category colour. Textures only.

MESH / TEAL

#5AAA9A

Category colour. Meshes only.

MATERIAL / COPPER

#DF8F6B

Category colour. Materials only.

CHARCOAL #0D151F
Canvas. Ink on light UI.

SURFACE #172331
Cards and panels.

PAPER #F4F6F8
Primary text. Light canvas.

MIST #B4C0CE
Body text on dark. 9.9:1.

GUIDE #778BA3
Rules, captions. Not body.

Colour has one job each

Category colours say what something is. Status colours say how it ended. A status colour can take over the glyph, but only after the shape has already said it.

CATEGORY: WHAT IT IS

Texture
Asset dots, legends, the mark.
6.1 : 1

Mesh
Asset dots, legends, the mark.
6.7 : 1

Material
Asset dots, legends, the mark.
7.2 : 1

Never on progress bars, buttons or links. Always on the app icon, lockups and static mark.

STATUS: WHAT IS HAPPENING

Working Guide #778BA3
Icon and text only. Pieces keep category colours while they shuffle.
5.3 : 1

Complete Green #7CC47F
Hue 122°, well clear of mesh teal (168°). Whole A turns green.
8.8 : 1

Warning Amber #E6C35C
Hue 45°, clear of copper (19°). Whole ! turns amber.
10.8 : 1

Error Rose #EC6A86
Hue 347°, cooler than copper. Whole X turns rose.
6.1 : 1

Status always ships as icon + sentence + colour. Colour is the third cue, not the first.

Contrast ratios measured against Charcoal #0D151F. On Surface #172331 all pairs stay at or above 4.5 : 1.

Quiet typography, confident geometry

One family: Inter, with Inter Display for large sizes. Only uppercase labels get letter-spacing.

ATELIER

WORDMARK. OUTLINED, NEVER TYPED

Inter Display SemiBold at +110 tracking, converted to outlines. The A is a crossbarless Λ with the material disc where the crossbar would be: the wordmark's single custom move, and it repeats the mark's idea. Minimum size: 12px cap height. Below that, use the mark alone.

DISPLAY
Inter Display SemiBold · 40–64px · lh 1.05 · −1.2%

HEADING
Inter SemiBold · 20–28px · lh 1.2 · 0

BODY
Inter Regular · 15–17px · lh 1.5 · 0

LABEL
Inter SemiBold, uppercase · 11–13px · +9%

Build a better asset.

Matching mesh to texture

Asset materials are ready to export. Bindings were preserved for all three assets.

TEXTURES / MESHES / MATERIALS

Built to survive 16px

Two drawings of the same mark. Use the master at 32px and above, and the small mark at 24px and below.

MASTER: 32PX AND UP

128PX 48PX 32PX

g = 14u, r = 46u, f = 6u. At 16px the gap becomes 0.9px and closes up.

SMALL: 24PX AND DOWN

64PX 24PX 16PX

g = 32u, r = 38u, k = 34u, f = 10u. Gaps stay a full 2px at 16px.

16PX, ENLARGED 5×

MASTER SMALL

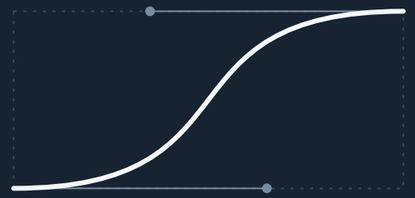

Enlarged from real 16px renders. In the master the gap drops below a pixel and the disc smears into the tile edge. The small mark keeps a clean dark ring round the disc.

Approach. Click. Settle.

How the pieces finally fit on a confirmed success. Build it, wind it up, hit hard, let it ring. The green arrives on contact.

01 — piece by piece

Assemble

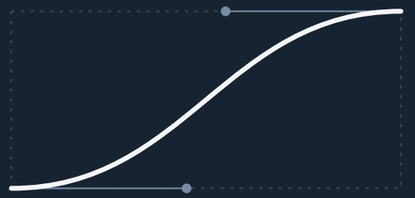

`cubic-bezier(0.65, 0, 0.35, 1)`

Tile settles in the middle; mesh comes in from the right, disc rises from below. Both stop 6u short.

02 — 120ms

Wind-up

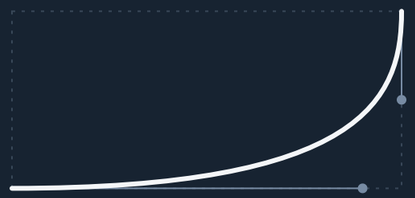

`cubic-bezier(0.45, 0, 0.55, 1)`

Mesh and disc draw back a further 10u. Big enough to read: this is the breath before the hit.

03 — 80ms

Snap

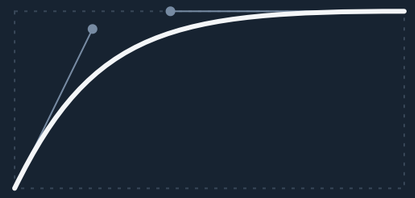

`cubic-bezier(0.9, 0, 1, 0.5)`

Hard ease-in through 16u, pressing 3u past the seat. Only a confirmed success event triggers this.

04 — 240ms

Recoil + rest

`cubic-bezier(0.2, 0.9, 0.4, 1)`

Bounce back 1u out of the seat (110ms), then ease home (130ms). One rebound, never two.

On contact: disc squashes 12% and springs back (300ms). Glyph punches to 104.5% (70ms out, 260ms spring). A green ripple leaves the disc (620ms). Green spreads outwards: disc, tile +60ms, mesh +120ms, 220ms each. Optional sound: tick, thump, two-note chime.

Reduced motion: no travel, shuffle, punch or ripple. The glyph cross-fades to each state's pose (150ms out, 150ms in), then colour changes. The icon and text carry the rest.

The animation cannot lie

The pieces only take a meaningful shape when a real build, import or export event arrives. Until then they keep trying.

Working

The pieces keep trying to fit: come apart, swing round to their docking side, come in one at a time, dock, tap twice, give up.

Never A, ! or X. Never a percentage unless it's measured.

Complete

Built piece by piece, then wind-up, hard snap, squash, punch and ripple, with green spreading out from the disc. Holds while the file shows as done.

The only state that forms the A.

Warning

A balancing act: disc down as the dot, mesh stood on it, tile set on top slightly off-centre. Turns amber, catches its balance, keeps wobbling.

Always paired with the specific warning text.

Error

Tile and mesh squeeze into bars and cross over each other at ±42°; the disc pins them. Clamps shut, turns rose.

No shaking. No particles. Always say why.

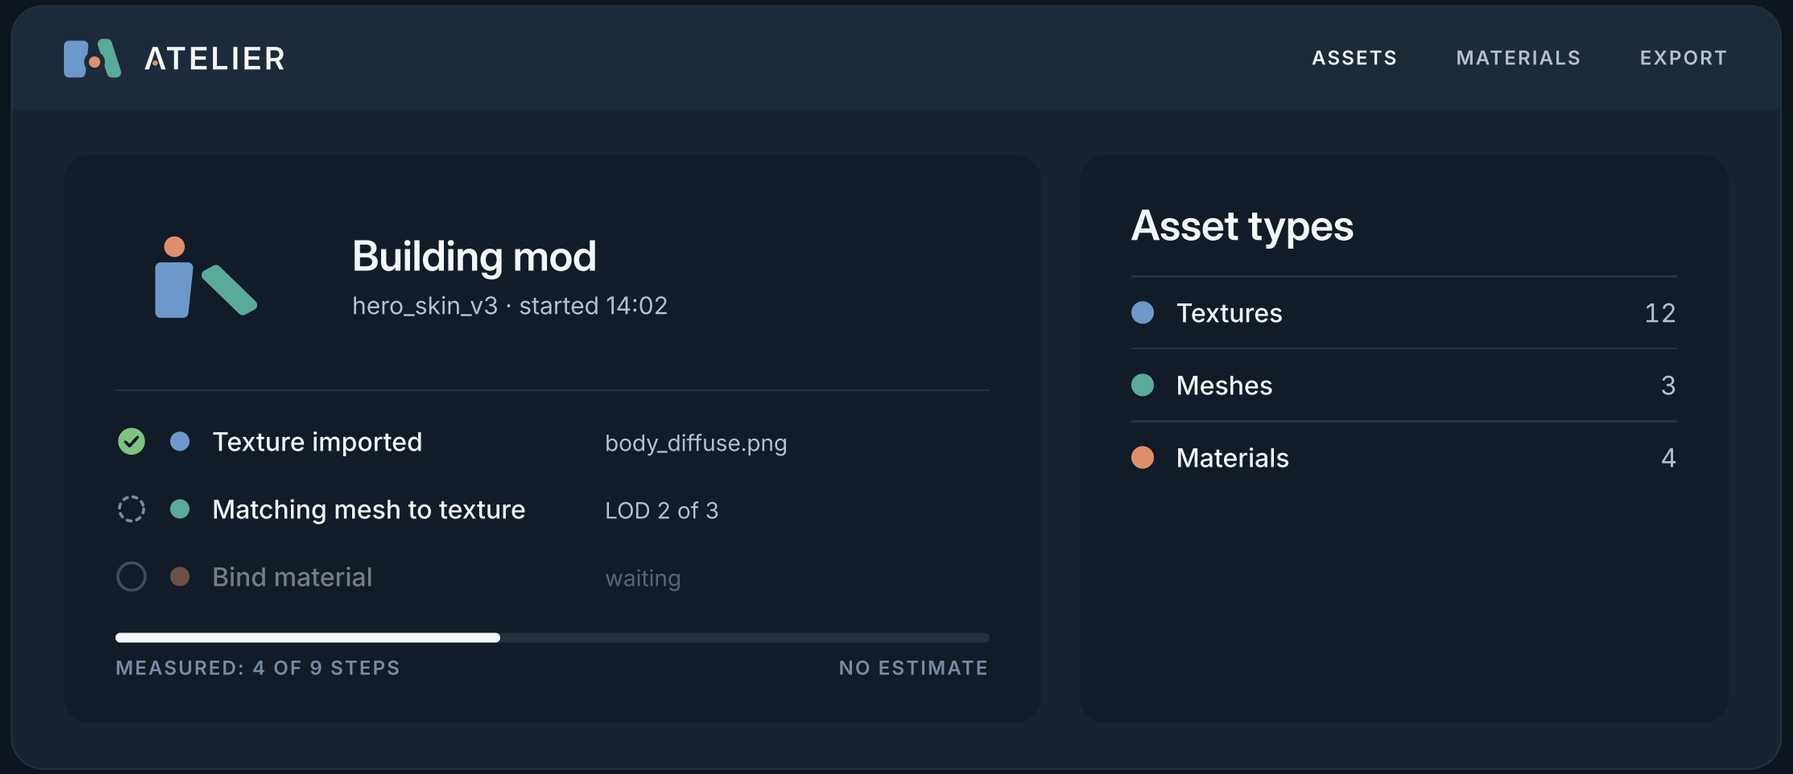

WRONG FITS

Physical, never faded. Pieces move one at a time on planned curves that keep a 14u gap. Layer order is fixed (tile back, mesh middle, disc front), so nothing re-stacks. A move is never cut off.

An identity that knows when to stop

Interface chrome stays neutral. Colour appears only where it names an asset type; progress is Paper on Surface.

COLOURED DOTS

Asset type only. Every stage row says what it's working on.

STATUS ICONS

Neutral shapes for state: done, working, waiting.

PROGRESS BAR

Paper, never teal. Filled only from counted steps; if nothing is countable, show no bar.

One system, many surfaces

Dark is preferred and light is supported. The mark never changes colour; only the canvas and the wordmark ink do.

APP ICON / DARK

APP ICON / LIGHT

SMALL MARK / FAVICON & AVATAR

Horizontal lockup: mark height = 2.7 × wordmark cap height, gap = 1.3 × cap height.

Clear, capable, never ornamental

Atelier speaks like a useful creative tool, not a tech manifesto. Say what happened, to which asset, and what to do next.

CLEAR

- ✓ Build complete. Three assets exported.
- ✗ ~~Woohoo! Your masterpiece is ready ✨~~

SPECIFIC

- ✓ Texture imported. Material binding preserved.
- ✗ ~~Everything looks good!~~

HELPFUL

- ✓ Mesh could not be read. Check hero_body.fbx exists and isn’t locked.
- ✗ ~~Oops, something went wrong.~~

RESTRAINED

- ✓ Exports to four formats.
- ✗ ~~Revolutionary creative synergy.~~

MESSAGE PATTERN

What happened → To which asset → What to do next

Drop the third part when there's nothing to do. Never drop the second.

What to protect

Consistency comes from constraints, not from repeating decorative motifs.

KEEP

- Three opaque pieces, each with a 14u halo
- Bites concentric with the disc
- The small mark at 24px and below
- Category colours on the app icon, lockups and static mark
- The A only on a confirmed success event
- Shape first, then status colour, then text

AVOID

- Fades, dissolves or re-stacking layers
- Status colours on the brand mark outside the status glyph
- Working poses that look like A, ! or X
- Gradients, bevels, glow, wireframes, cubes, batteries
- Letter-spacing on lowercase text
- A timed loop standing in for progress

From system to application

A production handoff needs working behaviour, not just lovely screenshots.

01 Freeze the mark

Canonical assets: `atelier-mark.svg`, `atelier-mark-small.svg`, `atelier-wordmark.svg`. Never redraw; never retype the wordmark.

02 Wire the states

Shuffle until an event arrives, then success → A + green, warning → !, error → X. Reference build: the **Motion states v1.2** prototype.

03 Test the scales

16, 24, 48 and 128px in dark and light. Confirm the switch to the small mark at 24px and below.

04 Verify accessibility

Text pairs ≥ 4.5 : 1 (page 06), `prefers-reduced-motion` path, 2px Paper focus ring with 2px offset, status never by colour alone.

CHANGED IN V1.2

- Working: pieces come apart and try six wrong fits, one piece at a time
- Complete: built piece by piece, then a heavier click; green spreads from the disc
- Warning: a balancing exclamation mark that keeps wobbling, amber
- Error: tile and mesh cross into an X, rose
- Fixed layer order; no fades or re-stacking, ever
- Complete green #7CC47F added to the status set
- v1.1: mark rebuilt on a grid, small mark, Inter, status palette split from category hues
